Paper 3 Advanced Practical Skills 1 **October/November 2021**

2 hours

You must answer on the question paper.

You will need: The materials and apparatus listed in the confidential instructions

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working, use appropriate units and use an appropriate number of significant figures.
- Give details of the practical session and laboratory, where appropriate, in the boxes provided.

Session
Laboratory

INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [ ].
- The Periodic Table is printed in the question paper.
- Notes for use in qualitative analysis are provided in the question paper.

Quantitative analysis

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

1 Group 1 metal carbonates have the formula $\mathbf{M}_2CO_3$. The identity of the metal ion, $\mathbf{M}^+$, may be determined by a gravimetric method. The metal carbonate is reacted with excess acid and the mass of carbon dioxide given off is measured.

$$\mathbf{M}_2CO_3(s) + 2HCl(aq) \rightarrow 2\mathbf{M}Cl(aq) + H_2O(l) + CO_2(g)$$

FA 1 is a Group 1 metal carbonate, $\mathbf{M}_2CO_3$.
FA 2 is 2.0 mol dm^{-3} hydrochloric acid, HC*l*.

(a) Method

- Use the 25 cm^3 measuring cylinder to transfer 25.0 cm^3 of **FA 2** into a conical flask. Weigh the flask with the acid and record the mass.
- Weigh the container with **FA 1** and record the mass.
- **Carefully** tip all of **FA 1** into the acid in the conical flask. Swirl the contents of the flask and leave the flask to stand.
- Weigh the container with any residual **FA 1**. Record the mass.
- Calculate and record the mass of **FA 1** added to the conical flask.
- Calculate and record the theoretical initial mass of flask + acid + **FA 1**.
- Swirl the flask occasionally while leaving it to stand for approximately 5 minutes.

During this step you may wish to start Question 2 or Question 3.

- Weigh the flask and contents and record this mass.
- Calculate and record the mass of carbon dioxide given off during the experiment.

Results

I	
II	
III	
IV	

[4]

(b) Calculations

(i) Calculate the number of moles of carbon dioxide given off in the experiment.

moles of CO_2 = ... mol [1]

(ii) Calculate the relative formula mass, M_r, of $\mathbf{M}_2CO_3$.

M_r of $\mathbf{M}_2CO_3$ = ... [1]

(iii) Identify the Group 1 cation, $\mathbf{M}^+$, in **FA 1**.
Show your working.

$\mathbf{M}^+$ is ..... . [1]

(c) One source of error in this experiment is the solubility of carbon dioxide in water.

(i) Suggest **one** modification, to the method in **(a)**, to reduce the solubility of carbon dioxide in the solution in the flask.

.....

..... [1]

(ii) An assumption made in the method in **(a)** is that the acid is in excess.

Show by calculation that this assumption is true.

[2]

[Total: 10]

2 The identity of a Group 1 metal carbonate may also be found by a titration method.

M^+ in this question may or may not be the same cation as that in **Question 1**.

$$M_2CO_3(s) + 2HCl(aq) \rightarrow 2MCl(aq) + H_2O(l) + CO_2(g)$$

FA 3 is an aqueous solution containing 7.46 g dm^{-3} of a Group 1 metal carbonate, M_2CO_3.
FA 4 is 0.110 mol dm^{-3} hydrochloric acid, HCl.
bromophenol blue indicator

(a) Method

- Fill the burette with **FA 4**.
- Pipette 25.0 cm^3 of **FA 3** into a conical flask.
- Add a few drops of bromophenol blue indicator.
- Carry out a rough titration and record your burette readings in the space below.

The rough titre is ..... cm^3.

- Carry out as many accurate titrations as you think necessary to obtain consistent results.
- Make sure any recorded results show the accuracy of your practical work.
- Record, in a suitable form below, all your burette readings and the volume of **FA 4** added in each accurate titration.

I	
II	
III	
IV	
V	
VI	
VII	

[7]

(b) From your accurate titration results, calculate a suitable mean value to use in your calculations. Show clearly how you obtained this value.

25.0 cm^3 of **FA 3** required ..... cm^3 of **FA 4**. [1]

(c) Calculations

(i) Give your answers to **(c)(ii)**, **(c)(iii)** and **(c)(iv)** to an appropriate number of significant figures. [1]

(ii) Calculate the number of moles of hydrochloric acid present in the volume of **FA 4** calculated in **(b)**.

moles of HC*l* = ... mol [1]

(iii) Calculate the number of moles of Group 1 metal carbonate, $\mathbf{M}_2CO_3$, present in 25.0 cm^3 of **FA 3**.

moles of $\mathbf{M}_2CO_3$ in 25.0 cm^3 = ... mol [1]

(iv) Calculate the relative formula mass, M_r, of $\mathbf{M}_2CO_3$.

M_r of $\mathbf{M}_2CO_3$ = ... [1]

(v) Identify the cation, $\mathbf{M}^+$.
Show your working.

$\mathbf{M}^+$ is ..... . [1]

(d) A student carrying out a similar experiment, using the same method, found the cation in **Question 2** to be Rb^+. The student is told that the acid provided, **FA 4**, was incorrectly prepared. The cation in the student's experiment should have been identified as K^+.

State whether the acid supplied is more, or less, concentrated than 0.110 mol dm^{-3}.
Explain your answer.

.....

Qualitative analysis

Where reagents are selected for use in a test, the **name** or **correct formula** of the element or compound must be given.

At each stage of any test you are to record details of the following:

- colour changes seen
- the formation of any precipitate and its solubility in an excess of the reagent added
- the formation of any gas and its identification by a suitable test.

You should indicate clearly at what stage in a test a change occurs.

If any solution is warmed, a **boiling tube** must be used.

Rinse and reuse test-tubes and boiling tubes where possible.

No additional tests for ions present should be attempted.

3 (a) **FA 5** is a salt containing one cation and one anion, both of which are listed in the Qualitative Analysis Notes.

(i) Place a small spatula measure of **FA 5** into a hard-glass test-tube and heat the tube, gently at first and then more strongly.
Record **all** your observations.

.....

.....

.....

..... [2]

(ii) Place the remaining **FA 5** into a 100 cm^3 beaker and add approximately 15 cm^3 of distilled water. Stir to make a solution. This solution is **FA 6**.
You will use portions of **FA 6** for the following test and tests in **(b)**.

To a 1 cm depth of **FA 6** in a test-tube add a 1 cm depth of dilute hydrochloric acid.
Record your observations.

.....

..... [1]

(b) (i) **FA 7** and **FA 8** are solutions each containing one cation and one anion, all of which are listed in the Qualitative Analysis Notes.

Carry out the following tests in separate test-tubes. Use a 1 cm depth of each solution unless otherwise specified.

	observations		
solution	**FA 6**	**FA 7**	**FA 8**
Add a few drops of aqueous silver nitrate.			
FA 6			
FA 7			

[4]

(ii) Carry out tests using aqueous sodium hydroxide and dilute sulfuric acid to identify or confirm the identity of the ions in **FA 6**, **FA 7** and **FA 8**.
Record your tests and observations in a table in the space below.

[5]

(c) (i) From your observations in **(a)** and **(b)** identify the cation and the anion present in each of **FA 6**, **FA 7** and **FA 8** by giving their formulae.

	cation	*anion*
FA 6		
FA 7		
FA 8		

[3]

(ii) Give an ionic equation for a precipitation reaction observed in **(b)(i)**. Include state symbols.

..... [1]

[Total: 16]

Qualitative Analysis Notes

1 Reactions of aqueous cations

ion	*reaction with*	
	NaOH(aq)	NH_3(aq)
aluminium, Al^{3+}(aq)	white ppt. soluble in excess	white ppt. insoluble in excess
ammonium, NH_4^+(aq)	no ppt. ammonia produced on heating	–
barium, Ba^{2+}(aq)	faint white ppt. is nearly always observed unless reagents are pure	no ppt.
calcium, Ca^{2+}(aq)	white ppt. with high [Ca^{2+}(aq)]	no ppt.
chromium(III), Cr^{3+}(aq)	grey-green ppt. soluble in excess	grey-green ppt. insoluble in excess
copper(II), Cu^{2+}(aq)	pale blue ppt. insoluble in excess	pale blue ppt. soluble in excess giving dark blue solution
iron(II), Fe^{2+}(aq)	green ppt. turning brown on contact with air insoluble in excess	green ppt. turning brown on contact with air insoluble in excess
iron(III), Fe^{3+}(aq)	red-brown ppt. insoluble in excess	red-brown ppt. insoluble in excess
magnesium, Mg^{2+}(aq)	white ppt. insoluble in excess	white ppt. insoluble in excess
manganese(II), Mn^{2+}(aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess
zinc, Zn^{2+}(aq)	white ppt. soluble in excess	white ppt. soluble in excess

2 Reactions of anions

ion	*reaction*
carbonate, CO_3^{2-}	CO_2 liberated by dilute acids
chloride, Cl^-(aq)	gives white ppt. with Ag^+(aq) (soluble in NH_3(aq))
bromide, Br^-(aq)	gives cream ppt. with Ag^+(aq) (partially soluble in NH_3(aq))
iodide, I^-(aq)	gives yellow ppt. with Ag^+(aq) (insoluble in NH_3(aq))
nitrate, NO_3^-(aq)	NH_3 liberated on heating with OH^-(aq) and Al foil
nitrite, NO_2^-(aq)	NH_3 liberated on heating with OH^-(aq) and Al foil
sulfate, SO_4^{2-}(aq)	gives white ppt. with Ba^{2+}(aq) (insoluble in excess dilute strong acids)
sulfite, SO_3^{2-}(aq)	gives white ppt. with Ba^{2+}(aq) (soluble in excess dilute strong acids)

3 Tests for gases

gas	*test and test result*
ammonia, NH_3	turns damp red litmus paper blue
carbon dioxide, CO_2	gives a white ppt. with limewater (ppt. dissolves with excess CO_2)
chlorine, Cl_2	bleaches damp litmus paper
hydrogen, H_2	‘pops’ with a lighted splint
oxygen, O_2	relights a glowing splint
