Paper 3 Advan

9701/31

Paper 3 Advanced Practical Skills 1

October/November 2021

2 hours

You must answer on the question paper.

You will need: The materials and apparatus listed in the confidential instructions

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working, use appropriate units and use an appropriate number of significant figures.
- Give details of the practical session and laboratory, where appropriate, in the boxes provided.

INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.
- Notes for use in qualitative analysis are provided in the question paper.

| For Examiner's Use | | |

| 1 | | |
| 2 | | |
| 3 | | |
| Total | | |

This document has 12 pages. Any blank pages are indicated.

Quantitative analysis

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

1 You will investigate a compound of a Group 1 element to determine which element is present. Group 1 carbonates decompose to give carbon dioxide when heated to high temperatures.

$$\mathbf{X}_2 CO_3(s) \rightarrow \mathbf{X}_2 O(s) + CO_2(g)$$

FA 1 is the carbonate of the element, X_2CO_3 .

(a) Method

- Weigh a crucible with its lid and record the mass.
- Add 1.40–1.60 g of FA 1 to the crucible.
- Weigh the crucible and its lid with **FA 1** and record the mass.
- Place the crucible on the pipe-clay triangle. Heat the crucible, with its lid on, gently for approximately 1 minute. Then heat strongly for another minute.
- Carefully remove the lid. Heat the crucible strongly for 4 minutes.
- Replace the lid and leave the crucible and residue to cool for at least 5 minutes.

While the crucible is cooling you may wish to begin work on Question 2.

- Reweigh the crucible and contents with its lid. Record the mass.
- Remove the lid. Heat the crucible and contents strongly for a further 2 minutes.
- Replace the lid and leave the crucible and residue to cool for at least 5 minutes. Reweigh
 the crucible and residue with its lid. Record the mass.
- Calculate and record the mass of FA 1 added to the crucible. Calculate the mass of residue obtained.

Results

I II III IV V

[5]

| | | 3 |
|----|-------|--|
| b) | Cal | Iculations |
| | (i) | Calculate the mass of carbon dioxide produced when the sample of $\mathbf{X}_2\mathrm{CO}_3$ was heated. |
| | | mass of CO ₂ produced = g [1] |
| | (ii) | Calculate the number of moles of $\mathbf{X}_2\mathrm{CO}_3$ needed to produce the mass of carbon dioxide calculated in (b)(i) . |
| | | moles of $\mathbf{X}_2 CO_3$ needed = mol [1] |
| | (iii) | Use your answer to (b)(ii) and the information on page 2 to calculate the relative formula mass, $M_{\rm r}$, of ${\bf X}_2{\rm CO}_3$. |
| | | $M_{\rm r}$ of $\mathbf{X}_2 CO_3 = \dots$ [1] |
| | (iv) | Use your answer to (b)(iii) to calculate the relative atomic mass, A_r , of X . Hence identify X . Explain how you reached your conclusion. |
| | | X is |
| | | [2] |
| c) | In t | his experiment you heated the sample of $\mathbf{X}_2 \text{CO}_3$ for approximately 8 minutes. |
| | | plain, using evidence from your results in (a) , whether your sample of \mathbf{X}_2 CO $_3$ had decomposed inpletely. |

[Total: 11]

2 In this experiment you will titrate a solution of the hydroxide of a Group 1 element, **Z**, with sulfuric acid. The equation for the reaction is shown.

Z may or may not be the same as **X**.

$$2\mathbf{Z}OH(aq) + H_2SO_4(aq) \rightarrow \mathbf{Z}_2SO_4(aq) + 2H_2O(l)$$

FA 2 is 26.3 g dm⁻³ aqueous hydroxide of metal **Z**, **Z**OH.

FA 3 is 0.0500 mol dm⁻³ sulfuric acid, H₂SO₄.

bromophenol blue indicator

(a) Method

- Pipette 25.0 cm³ of **FA 2** into the 250 cm³ volumetric flask.
- Add distilled water to the flask to make 250 cm³ of solution. Shake the flask thoroughly to
 ensure complete mixing. Label this solution FA 4.
- Rinse the pipette with a little distilled water and then a little **FA 4**.
- Fill the burette with **FA 3**.
- Pipette 25.0 cm³ of **FA 4** into a conical flask.
- Add a few drops of bromophenol blue indicator.
- Carry out a rough titration and record your burette readings in the space below.

| The rough titre iscm | The rough | titre is | | cm ³ |
|----------------------|-----------|----------|--|-----------------|
|----------------------|-----------|----------|--|-----------------|

- Carry out as many accurate titrations as you think necessary to obtain consistent results.
- Make sure your recorded results show the accuracy of your practical work.
- Record in a suitable form in the space below all of your burette readings and the volume of **FA 3** added in each accurate titration.

| VI | |
| VII | |

[7]

(b) From your accurate titration results, calculate a suitable mean value to use in your calculations. Show clearly how you obtained this value.

25.0 cm³ of **FA 4** required cm³ of **FA 3**. [1]

| (c) Calculations | (C) | Ca | Icul | atio | ns |
|------------------|-----|----|------|------|----|
|------------------|-----|----|------|------|----|

| (i) | Give your answers to (c)(ii) , (c)(iii) and (c)(iv) to the appropriate number of significant figures. |
|-------|---|
| (ii) | Calculate the number of moles of sulfuric acid present in the volume of FA 3 you calculated in (b) . |
| | |
| | moles of $H_2SO_4 = \dots mol$ [1] |
| (iii) | Use your answer to (c)(ii) and the information on page 4 to calculate the concentration, in mol dm ⁻³ , of Z OH present in FA 4 . |
| | |
| | concentration of FA 4 = mol dm ⁻³ [1] |
| (iv) | Calculate the concentration, in mol dm ⁻³ , of Z OH in FA 2 . |
| | |
| | concentration of FA 2 = mol dm ⁻³ [1] |
| /· ^ | Lieuweur enginer to (a)(iv) and the information on page 4 to coloulate the volctive etemio |

(v) Use your answer to (c)(iv) and the information on page 4 to calculate the relative atomic mass, A_n, of Z. Hence identify Z.Show your working.

(d) Using the value for the relative atomic mass of $\bf Z$ that you calculated in $\bf (c)(v)$, calculate the percentage difference of your value from that shown in the Periodic Table.

(If you did not obtain a value for the A_r of **Z**, assume it is 32.0. Note, this is **not** the correct value.)

percentage difference = % [1]

[Total: 15]

Qualitative analysis

Where reagents are selected for use in a test, the **name** or **correct formula** of the element or compound must be given.

At each stage of any test you are to record details of the following:

- colour changes seen
- the formation of any precipitate and its solubility in an excess of the reagent added
- the formation of any gas and its identification by a suitable test.

You should indicate clearly at what stage in a test a change occurs.

If any solution is warmed, a **boiling tube** must be used.

Rinse and reuse test-tubes and boiling tubes where possible.

No additional tests for ions present should be attempted.

- 3 Half-fill the 250 cm³ beaker with water and place it on a tripod and gauze above a heatproof mat. Heat the water until boiling and then turn off the Bunsen burner. You will use this as a hot water-bath in **3(b)(i)**.
 - (a) FA 5, FA 6 and FA 7 are solutions. Each solution contains one cation and one anion. Carbonate, CO₃²⁻, is **not** present in any of the solutions.
 - (i) Carry out the following tests and record your observations. Use a 1cm depth of solution in a test-tube for each test.

| test | | | |
|--|------|------|------|
| lest | FA 5 | FA 6 | FA 7 |
| Test 1 Add an equal depth of dilute sulfuric acid. | | | |
| Test 2 Add an equal depth of aqueous sodium carbonate. | | | |
| Test 3 Add an equal depth of aqueous magnesium chloride. | | | |

[5]

| (ii) | Use your observations in (a)(i) to suggest a possible formula for each of the following: | |
|-------|--|-----|
| | The cation in FA 5 is | |
| | The cation in FA 6 is | |
| | The anion in FA 7 is | [3] |
| (iii) | Apart from using an indicator, suggest a further test that would confirm the identity of the anion in FA 7 . | те |
| | Carry out this test and record the result. | |
| | | |
| | | |
| | [| [1] |
| (iv) | Did the result of your test in (a)(iii) confirm the identity of the anion in FA 7 ? Explain your answer. | |
| | | |
| | | |
| | | |

- (b) FA 8 is an aqueous solution.
 - (i) Carry out the following tests and record your observations.

| test | observations |
|---|--------------|
| Test 1 To a 1 cm depth of FA 8 in a test-tube, add a few drops of acidified potassium manganate(VII). Place the tube in the hot water-bath. | |
| Test 2 To a 1 cm depth of FA 8 in a test-tube, add a 1 cm length of magnesium ribbon. | |

| | ٠, | |
|--|----|---|
| | _ | |
| | _ | , |
| | | |
| | | |

| (ii) | For each observation, state what you can conclude about the chemical properties of F | A 8. |
|------|---|-------------|
| | Test 1 | |
| | Test 2 | |
| | | [2] |

[Total: 14]

2 Reactions of anions

| ion | reaction |
|--|--|
| carbonate, CO ₃ ²⁻ | CO ₂ liberated by dilute acids |
| chloride, C <i>l</i> ⁻ (aq) | gives white ppt. with Ag ⁺ (aq) (soluble in NH ₃ (aq)) |
| bromide, Br ⁻ (aq) | gives cream ppt. with Ag ⁺ (aq) (partially soluble in NH ₃ (aq)) |
| iodide, I ⁻ (aq) | gives yellow ppt. with Ag ⁺ (aq) (insoluble in NH ₃ (aq)) |
| nitrate, NO ₃ -(aq) | NH₃ liberated on heating with OH⁻(aq) and A <i>l</i> foil |
| nitrite, NO ₂ -(aq) | NH₃ liberated on heating with OH⁻(aq) and A <i>l</i> foil |
| sulfate, SO ₄ ²⁻ (aq) | gives white ppt. with Ba ²⁺ (aq) (insoluble in excess dilute strong acids) |
| sulfite, SO ₃ ²⁻ (aq) | gives white ppt. with Ba ²⁺ (aq) (soluble in excess dilute strong acids) |

3 Tests for gases

| gas | test and test result |
|---------------------------------|---|
| ammonia, NH ₃ | turns damp red litmus paper blue |
| carbon dioxide, CO ₂ | gives a white ppt. with limewater (ppt. dissolves with excess CO ₂) |
| chlorine, Cl ₂ | bleaches damp litmus paper |
| hydrogen, H ₂ | 'pops' with a lighted splint |
| oxygen, O ₂ | relights a glowing splint |
