CHEMISTRY 9701/22

Paper 2 AS Level Structured Questions

October/November 2023

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 60.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.
- Important values, constants and standards are printed in the question paper.

This document has 20 pages. Any blank pages are indicated.

| Th (a) | | ments silicon, phosphorus and sulfur a Describe the variation in atomic radi | | | Table. | |
|--------------------|------|---|-------------------|-------------------|------------------|----------|
| , , | (ii) | The melting point of silicon is 1410° Explain this difference. | | point of sulfur i | | [1] |
| (b) | | ole 1.1 shows some properties of the earlies first ionisation energy of P is not sho | elements Si to S | S. | | [3] |
| | | property | Si | Р | S | |
| | tota | I number of electrons in s subshells | | | | |
| | tota | I number of electrons in p subshells | | | | |
| | | first ionisation energy/kJ mol ⁻¹ | 786 | | 1000 | |
| | f | ormula of most common chloride | SiCl ₄ | PCl ₅ | SCl ₂ | |
| | (i) | Complete Table 1.1 to show the tot and S. | al number of s | and p electror | ns in an atom | of Si, P |
| | (ii) | Construct an equation to represent t | he first ionisati | on energy of Si | | [2] |
| | | | | | | [1] |

 $1060\,\mathrm{kJ}\,\mathrm{mol}^{-1}$

893 kJ mol⁻¹

(iii) Three possible values for the first ionisation energy of P are given.

619 kJ mol⁻¹

| | Circle the correct value. |
|------|--|
| | Explain your choice, including a comparison of your chosen value to those of Si and S. |
| | |
| | |
| | |
| | |
| | |
| | [4] |
| (iv) | $\mathrm{SiC}l_4$ and $\mathrm{PC}l_5$ each react with water, forming misty fumes. |
| | Identify the chemical responsible for the misty fumes. |
| | [1] |
| (v) | Predict the shape of the ${ m SC}l_2$ molecule. |
| | [1] |
| | [Total: 13 |

2 NO and NO_2 react at 25 °C to give N_2O_3 as shown in the equation.

$$NO(g) + NO_2(g) \rightleftharpoons N_2O_3(g)$$
 $\Delta H = -7.2 \text{ kJ mol}^{-1}$

The reaction is reversible and reaches equilibrium in a closed system.

(a) Fig. 2.1 shows how the rate of the forward reaction changes with time.

Initially, the rate of the reverse reaction is zero.

Complete Fig. 2.1 to sketch how the rate of the **reverse** reaction changes with time.

Fig. 2.1

[1]

(b) State how the position of equilibrium changes, if at all, when the reaction takes place at 100 °C.

Explain your answer.

Assume the pressure remains constant.

(c) Table 2.1 shows the composition of an equilibrium mixture of NO(g), NO $_2$ (g) and N $_2$ O $_3$ (g) at 101 kPa.

Table 2.1

| gas | number of moles at equilibrium/mol |
|-----------------|------------------------------------|
| NO | 0.605 |
| NO ₂ | 0.605 |
| N_2O_3 | 0.390 |

Calculate $K_{\rm p}$, the equilibrium constant with respect to partial pressures.

Deduce the units of $K_{\rm p}$.

| K_{n} | = | units |
|---------|---|-----------|
| Ρ | | [3] |

| (d) | Identify | one | natural | process | and | one | man-made | process | that | cause | the | formation | of |
|-----|----------|-------|---------|----------|-----|-----|----------|---------|------|-------|-----|-----------|----|
| | atmospl | heric | NO and | NO_2 . | | | | | | | | | |

| natural process | |
|-----------------|--|
|-----------------|--|

| (e) | NO | ₂ is a brown gas that can be used to form nitric acid. | |
|-----|-------|---|-----|
| | (i) | NO ₂ is a free radical. | |
| | | Define free radical. | |
| | | [| [1] |
| | (ii) | NO ₂ has a catalytic role in the oxidation of atmospheric sulfur dioxide. | |
| | | Write equations to show the catalytic role of NO_2 in this oxidation. | |
| | | [| |
| | (iii) | State one environmental consequence of the oxidation of atmospheric sulfur dioxide. | |
| | | [| [1] |
| (f) | A s | tudent titrates nitric acid with a base to form a solution containing aqueous magnesiu ate. | m |
| | (i) | Identify a base that the student could use. | |
| | | [| [1] |
| | (ii) | The student evaporates the water to obtain magnesium nitrate solid. When this solid heated it decomposes. | is |
| | | Write an equation for the decomposition of magnesium nitrate. | |
| | | [| [1] |
| | (iii) | State how the thermal stability of Group 2 nitrates changes down the group. | |
| | | [| [1] |
| | | [Total: 1 | 5] |

BLANK PAGE

| | om phosphorus. | solid. |
|---|---|---|
| | ith an excess of oxygen to form a white | solid. |
| tep 2 The white solid then | | |
| | reacts with water to form H ₃ PO ₄ . | |
| Vrite an equation for each step. | | |
| tep 1 | | |
| tep 2 | | |
| | | [2] |
| H ₃ PO ₄ is a weak Brønsted–Lowry | acid. | |
| efine weak Brønsted–Lowry acid | | |
| | | |
| | | |
| | | [2 |
| | | |
| ₄ is also formed in the process sh | own in reaction 1. | |
| eaction 1 4H ₃ PO ₃ — | → 3H ₃ PO ₄ + PH ₃ | |

| Та | able 3.1 | |
| compound | enthalpy change of formation, $\Delta H_{\rm f}/{\rm kJmol^{-1}}$ | |
| H ₃ PO ₃ | -972 | |
| H ₃ PO ₄ | -1281 | |
| PH ₃ | +9 | |
| Define enthalpy change of formation | on. | |
| | | |
| 1 | tep 2 I ₃ PO ₄ is a weak Brønsted–Lowry Define weak Brønsted–Lowry acid is also formed in the process sheaction 1 4H ₃ PO ₃ Ta compound H ₃ PO ₃ H ₃ PO ₄ PH ₃ | 3.1 shows some relevant thermodynamic data. |

| (ii) | Use the data in Table 3.1 to calculate the enthalpy change, $\Delta H_{\rm r}$, of reaction 1. |
|-------|---|
| | |
| | |
| | |
| | |
| | |
| | |
| | $\Delta H_{\rm r}$ =kJ mol-[2] |
| (iii) | Explain why reaction 1 is a disproportionation reaction. |
| | Explain your reasoning with reference to relevant oxidation numbers. |
| | |
| | |
| | [2 |
| | |

(c) Fig. 3.1 shows a reaction scheme that involves $\rm H_3PO_4$ in several reactions.

Fig. 3.1

| (i) | Identify ${\bf A}$, which reacts with propene in the presence of ${\bf H_3PO_4}$ in reaction 2. | |
|------|--|-----|
| | | [1] |
| (ii) | Draw the structure of B . | |

(iii) Name the type of reaction that occurs in reaction 3.

[1]

[2]

| (IV) | absorption frequency to monitor the reaction. |
|------|---|
| | Use Table 3.2 to identify a suitable bond whose absorption frequency can be used to monitor the progress of reaction 3. |
| | State the change you would see in the infrared spectrum during reaction 3. |
| | bond |
| | change in infrared spectrum |
| | |

Table 3.2

| bond | functional groups containing the bond | characteristic infrared absorption range (in wavenumbers)/cm ⁻¹ |
|------|---------------------------------------|--|
| C-O | hydroxy, ester | 1040–1300 |
| C=C | aromatic compound, alkene | 1500–1680 |
| C=O | amide carbonyl, carboxyl ester | 1640–1690 1670–1740 1710–1750 |
| C–H | alkane | 2850–2950 |

(d) H₃PO₄ also reacts with alcohols to form organophosphates.

Organophosphates are compounds similar to esters. They have the general structure shown in Fig. 3.2.

R = alkyl group

Fig. 3.2

(i) Complete the equation to suggest the products of the reaction of $\rm H_3PO_4$ with methanol, $\rm CH_3OH$.

$$H_3PO_4 + 3CH_3OH \rightarrow ...$$
 [1]

(ii) Compound **T** is a simple organophosphate.

The mass spectrum of **T** shows a molecular ion peak at m/e = 182. This peak has a relative intensity of 12.7.

The relative intensity of the M+1 peak is 0.84.

Deduce the number of carbon atoms in T.

Hence suggest the molecular formula of T.

Assume that phosphorus and oxygen exist as single isotopes.

Show your working.

[Total: 19]

4 Lactic acid, CH₃CH(OH)COOH, and pyruvic acid, CH₃COCOOH, both contain two functional groups.

lactic acid pyruvic acid H₃C C C O H

Fig. 4.1

(a)

| (i) | Explain why lactic acid exists as optical isomers. |
|-------|---|
| | |
| | [1] |
| (ii) | Give the systematic name of lactic acid. |
| | [1] |
| (iii) | Lactic acid forms hydrogen bonds with water. |
| | Complete Fig. 4.2 to show the formation of a hydrogen bond between one molecule of lactic acid and one molecule of water. |
| | Label the hydrogen bond. Show any relevant dipoles and lone pairs of electrons. |

[3]

(b) Two possible syntheses of pyruvic acid are shown in Fig. 4.3 and Fig. 4.4.

Each synthesis has a total of three steps.

Fig. 4.3

Fig. 4.4

(i) Complete the diagram in Fig. 4.5 to show the mechanism for the reaction of propene with Br_2 .

Include charges, dipoles, lone pairs of electrons and curly arrows, as appropriate.

[3]

(ii) Write an equation for the oxidation of lactic acid to pyruvic acid, the third step of Fig. 4.4.

Use [O] to represent one atom of oxygen from an oxidising agent.

(iii) Complete Table 4.1 to give details of the reagents and conditions used in each of the two syntheses shown in Fig. 4.3 and Fig. 4.4.

Table 4.1

| | | synthesis from propene (shown in Fig. 4.3) | synthesis from ethanal (shown in Fig. 4.4) |
|------------------------------|-------------|--|---|
| | first step | Br ₂ | |
| reagents and conditions used | second step | | |
| | third step | | |
