MATHEMATICS 9709/12

Paper 1 Pure Mathematics 1

October/November 2022

1 hour 50 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [].

This document has 20 pages. Any blank pages are indicated.

BLANK PAGE

Find the equation of the perpendicular bisector of AB .	[3]
Find the equation of the circle with centre A which passes through B .	
	[3]
	[3]
Find the equation of the circle with centre A which passes through B .	[3]
Find the equation of the circle with centre A which passes through B .	[3]
Find the equation of the circle with centre A which passes through B .	[3]
Find the equation of the circle with centre A which passes through B.	[3]
Find the equation of the circle with centre <i>A</i> which passes through <i>B</i> .	[3]
Find the equation of the circle with centre A which passes through B.	[3]
Find the equation of the circle with centre A which passes through B.	[3]
Find the equation of the circle with centre A which passes through B.	[3]
Find the equation of the circle with centre A which passes through B.	[3]

- 5 The graph with equation y = f(x) is transformed to the graph with equation y = g(x) by a stretch in the *x*-direction with factor 0.5, followed by a translation of $\begin{pmatrix} 0 \\ 1 \end{pmatrix}$.
 - (a) The diagram below shows the graph of y = f(x).

On the diagram sketch the graph of y = g(x).

(b)

[3]

Find an expression for $g(x)$ in terms of $f(x)$.	[2]

8	The	equation of a curve is such that $\frac{dy}{dx}$ =	$3x^{\frac{1}{2}} - 3x^{-\frac{1}{2}}$. The cur	ve passes through the p	point (3, 5).
	(a)	Find the equation of the curve.			[4]

(b)	Find the <i>x</i> -coordinate of the stationary point.	[2]
(c)	State the set of values of x for which y increases as x increases.	[1]

9 Functions f and g are defined by

$$f(x) = x + \frac{1}{x} \quad \text{for } x > 0,$$

$$g(x) = ax + 1 \quad \text{for } x \in \mathbb{R},$$

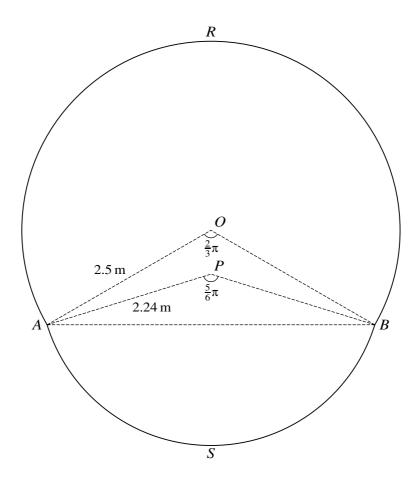

where a is a constant.

(a)	Find an expression for $gf(x)$.	[1]
		•••••
		•••••
		•••••
		•••••
(b)	Given that $gf(2) = 11$, find the value of a .	[2]
		•••••
(c)	Given that the graph of $y = f(x)$ has a minimum point when $x = 1$, explain whether or not f an inverse.	has

It is	given instead that $a = 5$.
(d)	Find and simplify an expression for $g^{-1}f(x)$.

(-)	
(e)	Explain why the composite function fg cannot be formed. [1]

10

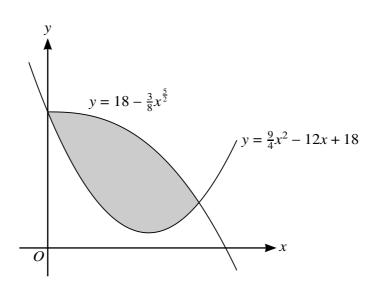

The diagram shows a cross-section *RASB* of the body of an aircraft. The cross-section consists of a sector *OARB* of a circle of radius 2.5 m, with centre O, a sector *PASB* of another circle of radius 2.24 m with centre P and a quadrilateral *OAPB*. Angle $AOB = \frac{2}{3}\pi$ and angle $APB = \frac{5}{6}\pi$.

(a)	Find the perimeter of the cross-section <i>RASB</i> , giving your answer correct to 2 decimal places. [3]

11	(a)	Find the coordinates of the minimum point of the curve $y = \frac{9}{4}x^2 - 12x + 18$.	[3]

The diagram shows the curves with equations $y = \frac{9}{4}x^2 - 12x + 18$ and $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$. The curves intersect at the points (0, 18) and (4, 6).

(b)	Find the area of the shaded region.	[5]

A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of P increasing at a constant rate of 2 units per second. Find the rate at which the y -coordinate of P is changing when $x = 4$.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of increasing at a constant rate of 2 units per second.
A point P is moving along the curve $y=18-\frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of P increasing at a constant rate of 2 units per second.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of increasing at a constant rate of 2 units per second.
A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of P increasing at a constant rate of 2 units per second.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of increasing at a constant rate of 2 units per second.
A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of P increasing at a constant rate of 2 units per second.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of increasing at a constant rate of 2 units per second.
A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of P increasing at a constant rate of 2 units per second.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of increasing at a constant rate of 2 units per second.
A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of P increasing at a constant rate of 2 units per second.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of increasing at a constant rate of 2 units per second.
A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of P increasing at a constant rate of 2 units per second.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x -coordinate of increasing at a constant rate of 2 units per second.
A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x-coordinate of P increasing at a constant rate of 2 units per second.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x-coordinate of increasing at a constant rate of 2 units per second.
A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x-coordinate of P increasing at a constant rate of 2 units per second.	A point P is moving along the curve $y = 18 - \frac{3}{8}x^{\frac{5}{2}}$ in such a way that the x-coordinate of increasing at a constant rate of 2 units per second.
increasing at a constant rate of 2 units per second.	increasing at a constant rate of 2 units per second.
increasing at a constant rate of 2 units per second.	increasing at a constant rate of 2 units per second.

Additional Page

If you use the following lined page to complete the answer(s) to any question(s), the question number(s) must be clearly shown.
