MATHEMATICS 9709/12

Paper 1 Pure Mathematics 1

October/November 2021

1 hour 50 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

## **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

## **INFORMATION**

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [ ].

This document has 20 pages.

Solve the equation $2\cos\theta = 7 - \frac{3}{\cos\theta}$ for $-90^{\circ} < \theta < 90^{\circ}$ .	[4
	•••••

Describe fully the two single transformations that have been combined to give the transformation.	e resulting

point $P(5, 6)$ lies on the transformed curve $y = f(2x) - 3$ . State the coordinates of the corresponding point on the original curve $y = f(x)$ .	[2]
State the coordinates of the corresponding point on the original curve $y = f(x)$ .	
State the coordinates of the corresponding point on the original curve $y = f(x)$ .	
State the coordinates of the corresponding point on the original curve $y = f(x)$ .	
State the coordinates of the corresponding point on the original curve $y = f(x)$ .	
State the coordinates of the corresponding point on the original curve $y = f(x)$ .	
State the coordinates of the corresponding point on the original curve $y = f(x)$ .	
State the coordinates of the corresponding point on the original curve $y = f(x)$ .	

3	The function	fic	dofinad	as follows:

$$f(x) = \frac{x+3}{x-1} \text{ for } x > 1.$$

(a)	Find the value of $ff(5)$ .	[2]
<b>(b)</b>	Find an expression for $f^{-1}(x)$ .	[3]

Find 4	the sauce	ation of	tha	irvo										
rina (	the equa	ation of	the Ct	irve.

(a)

The diagram shows the line  $x = \frac{5}{2}$ , part of the curve  $y = \frac{1}{2}x + \frac{7}{10} - \frac{1}{(x-2)^{\frac{1}{3}}}$  and the normal to the curve at the point  $A\left(3, \frac{6}{5}\right)$ .

Find the <i>x</i> -coordinate of the point where the normal to the curve meets the <i>x</i> -axis.	[5]

)	Find the area of the shaded region, giving your answer correct to 2 decimal places. [6]

The diagram shows the circle with equation  $x^2 + y^2 - 6x + 4y - 27 = 0$  and the tangent to the circle at the point P(5, 4).

(a) The tangent to the circle at P meets the x-axis at A and the y-axis at B.

Find the area of triangle $OAB$ , where $O$ is the origin.	[5]
