MATHEMATICS 9709/43

Paper 4 Mechanics May/June 2020

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.
- Where a numerical value for the acceleration due to gravity (g) is needed, use 10 m s⁻².

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

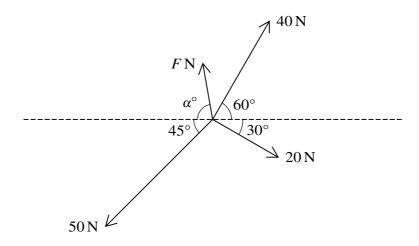

This document has 12 pages. Blank pages are indicated.

projected at a speed of $2 \mathrm{ms^{-1}}$ towards Q which is stationary. After the collision P and Q mo apposite directions with speeds of $0.5 \mathrm{ms^{-1}}$ and $1 \mathrm{ms^{-1}}$ respectively.	ve in

	Find the power required for the minibus to maintain a constant speed of $25 \mathrm{ms^{-1}}$.	[2
	Find the power required for the minibus to maintain a constant speed of $25\mathrm{ms^{-1}}$.	[2
	Find the power required for the minibus to maintain a constant speed of $25\mathrm{ms^{-1}}$.	[2
	Find the power required for the minibus to maintain a constant speed of 25 m s ⁻¹ .	[2
	Find the power required for the minibus to maintain a constant speed of 25 m s ⁻¹ .	
	Find the power required for the minibus to maintain a constant speed of 25 m s ⁻¹ .	

3

Four coplanar forces of magnitudes $40 \,\mathrm{N}, 20 \,\mathrm{N}, 50 \,\mathrm{N}$ and $F \,\mathrm{N}$ act at a point in the directions shown in the diagram. The four forces are in equilibrium.

Find F and α .	[6]

4	A car starts from rest and moves in a straight line with constant acceleration $a \mathrm{ms^{-2}}$ for a distance of
	50 m. The car then travels with constant velocity for 500 m for a period of 25 s, before decelerating to
	rest. The magnitude of this deceleration is $2a \mathrm{m s^{-2}}$.

(b)	Find the value of <i>a</i> .	[3]
(c)	Find the total time for which the car is in motion.	[3]

A block B of mass 4 kg is pushed up a line of greatest slope of a smooth plane inclined at 30° to the

5

	nts P and Q with speeds $12 \mathrm{ms^{-1}}$ and $8 \mathrm{ms^{-1}}$ respectively. P and Q are $10 \mathrm{m}$ apart level of Q .	i willi F Delov
a)	Find the decrease in kinetic energy of the block as it moves from P to Q .	[2
b)	Hence find the work done by the force pushing the block up the slope as the block P to Q .	ck moves from
		•••••••

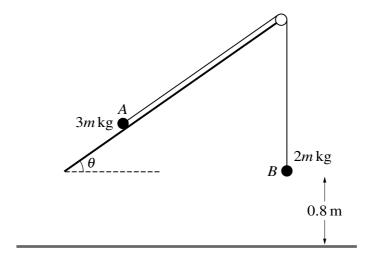

Find the time taken, after this instant, for the block to return to P .	I

A particle travels in a straight line PQ. The velocity of the particle t s after leaving P is v m s⁻¹, where

	$v = 4.5 + 4t - 0.5t^2.$	
)	Find the velocity of the particle at the instant when its acceleration is zero.	[3]

The particle comes to instantaneous rest at Q.

(b)	Find the distance PQ .	[6]

Two particles A and B, of masses $3m \, \mathrm{kg}$ and $2m \, \mathrm{kg}$ respectively, are attached to the ends of a light inextensible string. The string passes over a fixed smooth pulley which is attached to the edge of a plane. The plane is inclined at an angle θ to the horizontal. A lies on the plane and B hangs vertically, $0.8 \, \mathrm{m}$ above the floor, which is horizontal. The string between A and the pulley is parallel to a line of greatest slope of the plane (see diagram). Initially A and B are at rest.

(a)	Given that the plane is smooth, find the value of θ for which A remains at rest.	3]
		••
		••
		•••
		••
		•••
		•••
It is	given instead that the plane is rough, $\theta = 30^{\circ}$ and the acceleration of A up the plane is 0.1 m s ⁻²	•
(b)	Show that the coefficient of friction between A and the plane is $\frac{1}{10}\sqrt{3}$.	5]
		••
		•••
		•••
		•••

,	When B reaches the floor it comes to rest.
	Find the length of time after B reaches the floor for which A is moving up the plane. [You may assume that A does not reach the pulley.] [4]
