MATHEMATICS 9709/11

Paper 1 Pure Mathematics 1

October/November 2024

1 hour 50 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [].

This document has 20 pages. Any blank pages are indicated.

The diagram shows a sector of a circle, centre O, where OB = OC = 15 cm. The size of angle BOC is $\frac{2}{5}\pi$ radians. Points A and D on the lines OB and OC respectively are joined by an arc AD of a circle with centre O. The shaded region is bounded by the arcs AD and BC and by the straight lines AB and DC. It is given that the area of the shaded region is $\frac{209}{5}\pi$ cm².

| Find the perimeter of the shaded region. Give your answer in terms of π . | [5] |

| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| (b) | The graph of $y = f(x)$ is transformed to the graph of $y = h(x)$ by a reflection in one of the axes followed by a translation. It is given that the graph of $y = h(x)$ has a minimum point at the origin. |
| | Give details of the reflection and translation involved. [2] |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

The function g is defined by $g(x) = 3 + 6x - 2x^2$ for $x \le 0$.

(c) Sketch the graph of y = g(x) and explain why g is a one-one function. You are **not** required to find the coordinates of any intersections with the axes. [2]

| Sketch the graph of $y = g^{-1}(x)$ on your diagram in (c), and find an expression for $g^{-1}(x)$ You should label the two graphs in your diagram appropriately and show any relevant mirror line [4] |
